

COLLECTION ONE

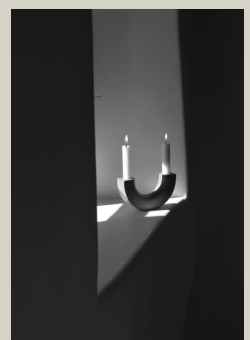

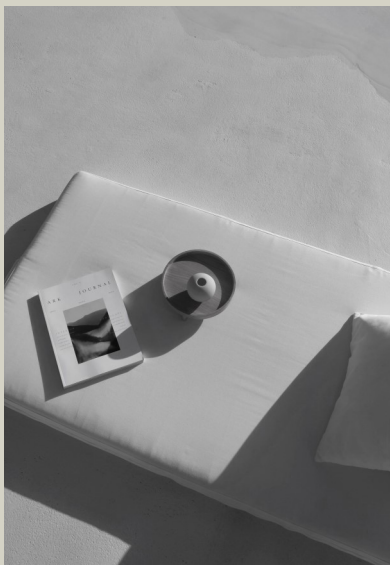

A CONSCIOUS APPROACH TO
MATERIALS AND CRAFT

FORESTA's Collection One was born from the brand's vision to keep traditional methods of forestry and craft alive by supporting environmentally conscious foresters and artisans in Honduras, the small Caribbean country where all FORESTA products are slowly grown and produced. Our designs were first and foremost guided by our appreciation for solid wood, allowing the material to be the focus of the object while the form subtly supports the function. To support these values of sustainability, the designs in Collection One are deliberately simple so that the timeless beauty of natural wood remains in focus.

SENSITIVE TO THE LAND
THAT SUPPLIES OUR TIM-
BERS AND THE PEOPLE WHO
MANUFACTURE OUR DESIGNS

Each design in Collection One was informed by our commitment to natural materials and ethical production, resulting in products infused with subtle nuance and distinctiveness left by the hands of the maker not found in mass production. Every piece is produced at small artisan

workshop in Honduras with a slow approach that respects the pace of the craftsmen and women FORESTA work with, aiming to challenge industrialized production trends and stressful working environments so that well-being and craft can flourish.

A VISION BEYOND DESIGN

As an ethical and environmentally conscious brand, we lean into this slower, kinder, and more caring way of bringing designs to the market. Through our collection, we hope to inspire new ways of thinking and spark conversations that put sustainable living, mindful consumerism, slow craft, and the environment in focus.
